

MEDICATION MANAGEMENT

Announcing CareATC Medication Management

Rx@Work by Northwind Pharmaceuticals

CareATC continues to offer convenient, free medications at the time of seeing a provider. Moving forward, acute medications as well as a 30-day supply of chronic medications will be offered in the clinic.

Rx@Home by Northwind Pharmaceuticals

CareATC now offers a convenient home delivery service for prescription medications presently dispensed through the clinic. Medications are delivered quickly, conveniently and securely right to your door. The provider simply e-scribes the medication to the Northwind Pharmacy, and the prescription will arrive via USPS at your door in 5–7 business days. Some prescriptions will include automatic refills every 90 days, and others may require you to request a refill, such as a PRN (as needed) medication. If your medication includes temperature-sensitive drug products, your package will arrive in a package with cold packs.

Northwind Pharmacy has a team of pharmacists available to partner with your providers to review employee medications and recommend cost-effective alternatives as well as coach patients on their medications to improve the population health of your employees. With each new prescription and refill, a complete review of all medications is performed by a pharmacist identifying potential drug interactions and contraindications for use. This service results in patient-centered medication therapy management with every medication.

Medications delivered direct to the patient home results in:

- Improved access and convenience to medications
- Improves productivity as a result of employees no longer needing to pick up medications during work hours
- Increased compliance and adherence to their medication regimen

CareATC Future

We are excited to expand our offering and include the following opportunities and benefits:

- Transitioning refills to home delivery allows for enhanced clinic productivity – allowing your provider to have more time with the patient, and to follow up with any specialist needed.
- Compliance packaging – pills sorted by morning, noon and night dosages – will be available soon!
- Your client manager will be reaching out to you to offer opportunities to expand the CareATC formulary offered through your clinic. An expanded formulary means expanded savings – and improved engagement from your employees!
